

The Howard Centre – Aluminium Glazed Façade & Roof, Sliding Doors

Project: The Howard Centre, Welwyn Garden City
Owner: Land Securities
Contractor: Durkan Pudelek
Architect: Haskoll Associates

The Howard Centre is a retail centre in Hertfordshire's Welwyn Garden City constructed around the mainline train station. Contracted by Durkan Pudelek and following design by Haskoll Associates, Stewart Fraser engineered, manufactured and installed the new main entrance doors and screens in glazed aluminium profiles with automatic sliding doors.

Using clear Suncool™ insulated units for the double glazed roof Stewart Fraser was able to control solar gain whilst providing high light transmission levels. The glazed façade was constructed in a similar way where bolted insulated units with glass fins were designed and installed to take calculated wind loads.

The main entrance sliding doors into a Starbucks café were designed to maximise the glass creating a welcoming, light-filled first impression to the building.

Our timely completion of the Howard Centre with quality products enabled Stewart Fraser to inspire customer satisfaction.

To find out how Stewart Fraser can add inspiration to your building requirements please contact us for a consultation.
