

40 Portman Square – Bespoke Entrance Solution

Project: Portman Square
Owner: Delancey and Standard Life Investments Ltd
Contractor: BAM Construct UK
Architect: Squire & Partners

40 Portman Square is a striking contemporary office in a prominent position on Portman Square near The Churchill Hotel in central London. The brief was to realise the architect's design vision for a dynamic entrance screen and doors to highlight this dominant façade.

The key challenge on this project was the size of glass involved. The architect's design for the entrance screen required glass dimensions of 2800mm wide by 6000mm high made-up of two 8mm toughened panes laminated together.

The architect also required tall revolving and pass doors in proportion to the size of the entrance and specified an all glass revolving door with in ground operator and similar height swing doors with an in ground operator for the disabled entrance; all 3.5m high.

Portman Square is typical of Stewart Fraser's flexible approach to projects. We sourced the best products available to resolve the necessary glass sizes and tolerances. The result is an inspiring entrance solution that perfectly marries concept and construction.
